IEE Proceedings

SCIENCE, MEASUREMENT AND TECHNOLOGY

The Institution of Electrical Engineers, Savoy Place, London WC2R 0BL, United Kingdom
Publishing Department: Michael Faraday House, Six Hills Way, Stevenage, Herts. SG1 2AY, United Kingdom

Volume 149 2002 UK ISSN 1350–2344

HONORARY EDITORS

Dr. G.W. Chantry (*International Technology Transfer Consultant*)
Dr. M.J. Cunningham (*University of Manchester*)
Dr. R. A. Fouracre (*University of Strathclyde*)

Pages in issues of *IEE Proc.-Sci. Meas. Technol.*, 2002

Pages	Issue No.	Date
1–48	1	January
49–112	2	March
113–152	3	May
153–180	4	July
181–296	5	September
297–350	6	November

AC MACHINES

Calculation of electrical machine magnetic stray fields p190
Representation of windings in the 3-D finite element description of electromagnetic converters p186

ACOUSTICS AND ULTRASONICS

Temperature as a limitation to the accuracy of SETSAW devices as quantum standards of current p299

AMPLIFIERS

Monte Carlo estimation of noise-parameter uncertainties p333

ANTENNA THEORY

Complete surface current distribution in a normal-mode helical antenna using a Galerkin solution with sinusoidal basis functions p272

BIOMEDICAL ENGINEERING

Design of solid broadband human tissue simulant materials p323

CABLES AND OVERHEAD LINES

Evaluation of the Guang Dong lightning location system with transmission line fault data p9

CALIBRATION

Developments in lightwave S-parameter measurement techniques p345
Improvements to the microwave mixer and power sensor linearity measurement capability at the National Physical Laboratory p329
Measurements of the electrical conductivity of water p320
Modelling the effect of port recession on VNA one-port calibrations p339

CIRCUIT COMPONENTS

Erosion mechanism of silver in a single arc discharge across a static gap p172

CIRCUIT THEORY AND DESIGN

Characterisation of high-speed multiconductor interconnections p85
Harmonic and intermodulation performance of analogue-to-digital converters with multibit errors and additive dither p127

COMMUNICATION SYSTEM THEORY

Application of the modal transmission-line method to radiowave propagation through building walls p258

CONTROL EQUIPMENT

Transient analysis of PWM-excited electromagnetic actuators p199

DC MACHINES

Calculation of electrical machine magnetic stray fields p190
Representation of windings in the 3-D finite element description of electromagnetic converters p186

DIELECTRIC MATERIALS AND DEVICES

Design of solid broadband human tissue simulant materials p323

DIGITAL ELECTRONICS

Harmonic and intermodulation performance of analogue-to-digital converters with multibit errors and additive dither p127
Investigation of binary Josephson arrays for arbitrary waveform synthesis p313
Shaft encoder characterisation through analysis of the mean-squared errors in nonideal quantised systems p99

EDDY CURRENTS

High-order finite elements of complete and incomplete bases in electromagnetic-field computation p147
Reduced vector potential formulations for FI²TD schemes p232
Transient analysis of PWM-excited electromagnetic actuators p199

ELECTRIC DISCHARGES

Memory propagation of negative point-to-plane corona under AC voltage p117
Modelling partial discharge inception and extinction voltages of sheet samples of solid insulating materials using an artificial neural network p73
Post-arc current reconstruction based on actual circuit breaker measurements p17

ELECTRIC MACHINES

Modelling losses in electrical steel laminations p218

ELECTROMAGNETIC COMPATIBILITY

Exact solution of the low-frequency coplanar loops shielding configuration p37
Fast and accurate intermediate-level modelling approach for EMC analysis of enclosures p281
MESAF: software for assessing the electromagnetic compatibility of complex systems p227
Technique for computing the response of a line of finite length excited by high frequency electromagnetic fields p289

ELECTROMAGNETIC FIELDS

Accurate modelling of an arbitrary placed thin wire in a coarse mesh p250
Computation of the flux linkage of windings from magnetic scalar potential finite element solutions p182
Design of a foil-coiled inductor for the heating of steel wires p203
Electromagnetic quantities in 3-space and the dual Hodge operator p138
Electromagnetic quantities in 4-D space and the dual Hodge operator p158
Field optimisation in a synchronous generator with high temperature superconducting field winding and magnetic core p194
High-order finite elements of complete and incomplete bases in electromagnetic-field computation p147
Modelling losses in electrical steel laminations p218
Representation of windings in the 3-D finite element description of electromagnetic converters p186
Special hybrid finite element/boundary element method for open magnetic field problems p242
Wavelet method in the solution of magnetic field integral equations p286

ELECTROMAGNETIC WAVES

Efficient description of fine features using digital filters in time-domain computational electromagnetics p254
Electromagnetic quantities in 3-space and the dual Hodge operator p138
High-frequency diffraction by a rectangular impedance cylinder on an impedance plane p49
MNM: a technique for the iterative solution of matrix equations arising in the method of moments formulation p246
Reduction of late time instabilities of the finite-difference time-domain method in curvilinear co-ordinates p267

ELECTROMAGNETISM

Accurate modelling of an arbitrary placed thin wire in a coarse mesh p250
Calculation of electrical machine magnetic stray fields p190
Computation algorithms for efficient coupled electromagnetic-thermal device simulation p67
Computation of the flux linkage of windings from magnetic scalar potential finite element solutions p182
Coupled finite-element, spectral-element discretisation for models with circular inclusions and far-field domains p237
Efficient description of fine features using digital filters in time-domain computational electromagnetics p254
Electromagnetic quantities in 4-D space and the dual Hodge operator p158
GRS method for Pareto-optimal front identification in electromagnetic synthesis p207
MNM: a technique for the iterative solution of matrix equations arising in the method of moments formulation p246
Reduced vector potential formulations for FI²TD schemes p232
Special hybrid finite element/boundary element method for open magnetic field problems p242
Technique for computing the response of a line of finite length excited by high frequency electromagnetic fields p289
Transient analysis of PWM-excited electromagnetic actuators p199
Wavelet method in the solution of magnetic field integral equations p286

ENGINEERING COMPUTING

Harmonic and intermodulation performance of analogue-to-digital converters with multibit errors and additive dither p127
MESAF: software for assessing the electromagnetic compatibility of complex systems p227

FILTERS AND FILTERING

Efficient description of fine features using digital filters in time-domain computational electromagnetics p254
Temperature as a limitation to the accuracy of SETSAW devices as quantum standards of current p299

HISTORY

Evolution of near vertical incidence skywave communications and the Battle of Arnhem p92

IMAGE SENSORS

Binocular-vision-based position sensor with PSDs and its application to mobile robot following p79

INSTRUMENTATION AND MEASUREMENT

Cryogenic current comparator bridge for quantum Hall resistance ratio measurements p302
Developments in lightwave S-parameter measurement techniques p345
Improvements to the microwave mixer and power sensor linearity measurement capability at the National Physical Laboratory p329
Investigation of binary Josephson arrays for arbitrary waveform synthesis p313
Maintenance and dissemination of voltage standards by Zener-diode-based instruments p305
Measurements of the electrical conductivity of water p320
Modelling the effect of port recession on VNA one-port calibrations p339

Removal of time-varying errors in network-analyser measurements: signal normalisation and test results p31
Removal of time-varying errors in network analyser measurements: system design p22

INSULATORS AND INSULATION

Modelling partial discharge inception and extinction voltages of sheet samples of solid insulating materials using an artificial neural network p73

LIGHTING

Lamp arc resistance modelling of high-intensity-discharge (HID) lamps p45

MAGNETIC MATERIALS AND DEVICES

Comparison of neural network and polynomial models for the approximation of nonlinear and anisotropic ferromagnetic materials p214
Computation of deformation of ferromagnetic material p222
Field optimisation in a synchronous generator with high temperature superconducting field winding and magnetic core p194
Modelling losses in electrical steel laminations p218

MAGNETIC MEASUREMENT

Quality inspection of electroplated materials using planar type micro-magnetic sensors with post-processing from neural network model p165

MATERIALS SCIENCE

Design of solid broadband human tissue simulant materials p323

MATERIALS TESTING

Erosion mechanism of silver in a single arc discharge across a static gap p172

MATHEMATICAL TECHNIQUES

Efficient description of fine features using digital filters in time-domain computational electromagnetics p254
Electromagnetic quantities in 3-space and the dual Hodge operator p138
Method for RMS and power measurements based on the wavelet packet transform p60
Removal of time-varying errors in network-analyser measurements: signal normalisation and test results p31

MEASUREMENT OF SPECIFIC VARIABLES

Cryogenic current comparator bridge for quantum Hall resistance ratio measurements p302
Developments in lightwave S-parameter measurement techniques p345
Improvements to the microwave mixer and power sensor linearity measurement capability at the National Physical Laboratory p329
Investigation of binary Josephson arrays for arbitrary waveform synthesis p313
Maintenance and dissemination of voltage standards by Zener-diode-based instruments p305
Measurements of the electrical conductivity of water p320
Method for RMS and power measurements based on the wavelet packet transform p60
Monte Carlo estimation of noise-parameter uncertainties p333
Shaft encoder characterisation through analysis of the mean-squared errors in nonideal quantised systems p99

MEASUREMENT SCIENCE

Cryogenic current comparator bridge for quantum Hall resistance ratio measurements p302
Developments in lightwave S-parameter measurement techniques p345
Improvements to the microwave mixer and power sensor linearity measurement capability at the National Physical Laboratory p329
Investigation of binary Josephson arrays for arbitrary waveform synthesis p313
Maintenance and dissemination of voltage standards by Zener-diode-based instruments p305
Measurements of the electrical conductivity of water p320
Modelling the effect of port recession on VNA one-port calibrations p339
Temperature as a limitation to the accuracy of SETSAW devices as quantum standards of current p299

MICROWAVE MEASUREMENT TECHNIQUES

Improvements to the microwave mixer and power sensor linearity measurement capability at the National Physical Laboratory p329
Modelling the effect of port recession on VNA one-port calibrations p339
Monte Carlo estimation of noise-parameter uncertainties p333

MICROWAVE TECHNOLOGY

Design of solid broadband human tissue simulant materials p323
Developments in lightwave S-parameter measurement techniques p345
Improvements to the microwave mixer and power sensor linearity measurement capability at the National Physical Laboratory p329
Monte Carlo estimation of noise-parameter uncertainties p333

MILITARY SYSTEMS

Evolution of near vertical incidence skywave communications and the Battle of Arnhem p92
Fast and accurate intermediate-level modelling approach for EMC analysis of enclosures p281

MOBILE RADIO

Application of the modal transmission-line method to radiowave propagation through building walls p258

MODULATORS AND DEMODULATORS

Improvements to the microwave mixer and power sensor linearity measurement capability at the National Physical Laboratory p329

NEURAL NETWORKS

Modelling partial discharge inception and extinction voltages of sheet samples of solid insulating materials using an artificial neural network p73

NUMERICAL ANALYSIS

3-D discontinuous sheet for finite-element time-domain modelling of thin metallic films p277
Application of finite element methods to photonic crystal modelling p293
Calculation of electrical machine magnetic stray fields p190
Characterisation of high-speed multiconductor interconnections p85
Comparison of neural network and polynomial models for the approximation of nonlinear and anisotropic ferromagnetic materials p214
Complete surface current distribution in a normal-mode helical antenna using a Galerkin solution with sinusoidal basis functions p272
Computation algorithms for efficient coupled electromagnetic-thermal device simulation p67
Computation of deformation of ferromagnetic material p222
Computation of the flux linkage of windings from magnetic scalar potential finite element solutions p182
Conformal mapping: Limitations for waveguide bend analysis p262
Coupled finite-element, spectral-element discretisation for models with circular inclusions and far-field domains p237
Efficient description of fine features using digital filters in time-domain computational electromagnetics p254
Field optimisation in a synchronous generator with high temperature superconducting field winding and magnetic core p194
GRS method for Pareto-optimal front identification in electromagnetic synthesis p207
Harmonic and intermodulation performance of analogue-to-digital converters with multibit errors and additive dither p127
High-frequency diffraction by a rectangular impedance cylinder on an impedance plane p49
High-order finite elements of complete and incomplete bases in electromagnetic-field computation p147
Measurements of the electrical conductivity of water p320
MNM: a technique for the iterative solution of matrix equations arising in the method of moments formulation p246
Reduced vector potential formulations for FI²TD schemes p232
Reduction of late time instabilities of the finite-difference time-domain method in curvilinear co-ordinates p267
Representation of windings in the 3-D finite element description of electromagnetic converters p186
Shaft encoder characterisation through analysis of the mean-squared errors in nonideal quantised systems p99
Special hybrid finite element/boundary element method for open magnetic field problems p242
Technique for computing the response of a line of finite length excited by high frequency electromagnetic fields p289
Transient analysis of PWM-excited electromagnetic actuators p199
Wavelet method in the solution of magnetic field integral equations p286

OPTICAL IMAGE PROCESSING

Binocular-vision-based position sensor with PSDs and its application to mobile robot following p79

OPTICAL MATERIALS

Application of finite element methods to photonic crystal modelling p293

OPTICAL WAVEGUIDES

Conformal mapping: Limitations for waveguide bend analysis p262

OPTIMISATION

Complete surface current distribution in a normal-mode helical antenna using a Galerkin solution with sinusoidal basis functions p272
GRS method for Pareto-optimal front identification in electromagnetic synthesis p207

POWER ENGINEERING COMPUTING

Calculation of electrical machine magnetic stray fields p190

POWER SYSTEMS AND APPLICATIONS

3-D discontinuous sheet for finite-element time-domain modelling of thin metallic films p277
Design of a foil-coiled inductor for the heating of steel wires p203
Impeder for HF inductive welding of steel tubes p113

POWER SYSTEMS AND PLANTS

Evaluation of the Guang Dong lightning location system with transmission line fault data p9

PRODUCTION ENGINEERING

Organisational factors for success in new product development p105
Quality inspection of electroplated materials using planar type micro-magnetic sensors with post-processing from neural network model p165

RADIO SYSTEMS

Evolution of near vertical incidence skywave communications and the Battle of Arnhem p92

RADIOWAVE PROPAGATION

3-D discontinuous sheet for finite-element time-domain modelling of thin metallic films p277
Application of the modal transmission-line method to radiowave propagation through building walls p258
Fast and accurate intermediate-level modelling approach for EMC analysis of enclosures p281

ROBOTICS

Binocular-vision-based position sensor with PSDs and its application to mobile robot following p79

SEMICONDUCTOR DEVICES

Maintenance and dissemination of voltage standards by Zener-diode-based instruments p305
Temperature as a limitation to the accuracy of SETSAW devices as quantum standards of current p299

SENSORS AND ACTUATORS

Improvements to the microwave mixer and power sensor linearity measurement capability at the National Physical Laboratory p329
Quality inspection of electroplated materials using planar type micro-magnetic sensors with post-processing from neural network model p165
Shaft encoder characterisation through analysis of the mean-squared errors in nonideal quantised systems p99

SIGNAL GENERATORS

Investigation of binary Josephson arrays for arbitrary waveform synthesis p313

SIGNAL PROCESSING

Shaft encoder characterisation through analysis of the mean-squared errors in nonideal quantised systems p99

SINGLE ANTENNAS

Complete surface current distribution in a normal-mode helical antenna using a Galerkin solution with sinusoidal basis functions p272
Exact solution of the low-frequency coplanar loops shielding configuration p37

SOFTWARE TECHNIQUES

MESAF: software for assessing the electromagnetic compatibility of complex systems p227

STATISTICAL ANALYSIS

MNM: a technique for the iterative solution of matrix equations arising in the method of moments formulation p246
Modelling the effect of port recession on VNA one-port calibrations p339
Monte Carlo estimation of noise-parameter uncertainties p333

SUPERCONDUCTING MATERIALS AND DEVICES

Cryogenic current comparator bridge for quantum Hall resistance ratio measurements p302
Field optimisation in a synchronous generator with high temperature superconducting field winding and magnetic core p194
Investigation of binary Josephson arrays for arbitrary waveform synthesis p313
Self-field AC power dissipation in high-T_c superconducting tapes and a prototype cable p2

SWITCHGEAR

Post-arc current reconstruction based on actual circuit breaker measurements p17
Quantification of the interrupting performance of high-voltage circuit breakers p153

SYNCHRONOUS MACHINES

Field optimisation in a synchronous generator with high temperature superconducting field winding and magnetic core p194

THIN FILM GROWTH

Quality inspection of electroplated materials using planar type micro-magnetic sensors with post-processing from neural network model p165

TRANSFORMERS

Design of a foil-coiled inductor for the heating of steel wires p203
Representation of windings in the 3-D finite element description of electromagnetic converters p186

TRANSMISSION LINE THEORY

Accurate modelling of an arbitrary placed thin wire in a coarse mesh p250
Application of the modal transmission-line method to radiowave propagation through building walls p258
Characterisation of high-speed multiconductor interconnections p85
Efficient description of fine features using digital filters in time-domain computational electromagnetics p254
Technique for computing the response of a line of finite length excited by high frequency electromagnetic fields p289

TRANSPORTATION

Calculation of electrical machine magnetic stray fields p190

WAVEGUIDE COMPONENTS

Exact solution of the low-frequency coplanar loops shielding configuration p37

WAVEGUIDE THEORY

Conformal mapping: Limitations for waveguide bend analysis p262
Fast and accurate intermediate-level modelling approach for EMC analysis of enclosures p281
